Re: Covid-19 At Home Tests

Beginning January 15, 2022, FDA approved over the counter COVID-19 diagnostic tests are reimbursable at no cost per federal guidance and mandate. FDA approved tests will either be covered as a prescription billed to the prescription drug coverage plan, AmWINS Rx, at the point of sale with an in-network pharmacy or will be reimbursable, if a member paid out-of-pocket on or after January 15, 2022.

What is covered?

Up to eight (8) test kits per eligible individual are covered per month and are reimbursable for the total cost if using an in-network pharmacy and processed through AmWINS Rx at the point of sale. If a member chooses to go to a pharmacy outside of the network, reimbursement is up to \$12.00 per kit. Coverage is valid regardless of whether all eight (8) test kits are billed at once or one at a time. For example, a covered family of four (4) can receive up to thirty-two (32) tests per 30-day period. A prescriber's authorization is not required, and the test kits will be billed as a normal prescription for reimbursement.

How to be reimbursed for COVID-19 at home test kits:

If you purchase at home COVID-19 test kits on or after January 15th, 2022, you may complete a DMR form for reimbursement. DMR forms can be found at:
